

Working Together to Build Confidence

Government

Military

Industry

Hatha Systems is a leading provider of Certification and Accreditation (C&A) Services to Fortune 500 firms, DoD Components and Services, and Civil Agencies.

Hatha Systems Capabilities:

Our C&A capabilities and services offerings are built by individuals with decades of leadership/experience as practitioners and policy developers. We have always promoted the view that certification and accreditation is a lifecycle approach with planning starting as early as the requirements stage of any program (both systems and infrastructure). We use this lifecycle approach to deliver services to both Federal (DOD, Civil Agencies) and commercial clients.

We have in-house capabilities for clients requiring compliance to DIACAP, NIST 800-37, FIPS 200, DCID 6/3. We leverage experience, industry best practices, knowledge of legislative dicta (Sarbanes-Oxley, HIPAA, FISMA), and industry-wide standards, guidance and directives to bring an integrated, cost-effective, and tailored solution to satisfy customer needs.

Additionally, we have been a leading provider of Defense Information Assurance Certification and Accreditation Process (DIACAP), DITSCAP to DIACAP migration and associated training services, since September 2006, to early adopters requiring DIACAP compliance. Our DIACAP services, both implementation and training, were developed by individuals with direct involvement in the DOD DIACAP development.

What is Certification and Accreditation (C&A)?

Certification and Accreditation is an audit process used to evaluate and approve the security posture of systems and infrastructure prior their release to the operational environment. This audit process is used in support of organizational risk management program and provides necessary evidence to support the organizational FISMA reporting requirements. Certification and Accreditation is used extensively in government and is gaining momentum in both banking and healthcare sectors, driven by information assurance (security) compliance requirements.

DIACAP - Integrating C&A into the System Lifecycle

DIACAP Services:

Hatha Systems has been a leading provider of DIACAP, DITSCAP to DIACAP migration and associated training services, since September 2006, to early adopters requiring DIACAP compliance. Our DIACAP program, both implementation and training, was developed by a team with direct involvement in the DOD DIACAP development.

With its approval, DIACAP is the standardized methodology for evaluating the security posture of any DOD system. Hatha has taken a step further to incorporate the IA controls to the DIACAP lifecycle program as it relates to the Defense Acquisition review cycles, thus providing an IA view as well as program management & systems engineering view to the service offering and training.

DIACAP Training:

We are a leading provider of DITSCAP to DIACAP migration and DIACAP training to IA professionals and program managers. We have provided a number of on-site training courses to clients with a tailored approach to fit their specific certification needs for both infrastructure and systems.

The DIACAP training course is designed for those who need to meet the requirement of implementing the certification & accreditation process as outlined in DODI 8510.01 for developmental as well as operational systems.

We deliver 2-, 3-, and 5- day intensive training curricula designed to educate targeted audiences on the requirements of the new processes and the activities necessary to implement a DIACAP solution for their enterprise infrastructure and systems. These courses can be further tailored in support Program Managers, System Owners, System Administrators, Security Officers, and other certification team members, depending on their specific roles and responsibilities.

Hatha Systems provides services supporting systems' knowledge discovery and analysis. Our service offering is focused specifically on Software Systems Modernization, Security Analysis and Certification and Accreditation (C&A) Services. The firm's leadership has extensive industry experience leading both large and small businesses as well as driving international standards definition and adoption. Hatha Systems is a small, woman-owned U.S. business.
