

Position: C# Software Developer

Overview: The position involves responsibility for maintaining and continuing to develop a complex software application dedicated to the analysis of other complex software applications. It requires both discipline and high creativity in implementing highly efficient solutions and user interfaces which are intuitive and consistent.

Responsibilities:

- Understand the code, architecture and principles of an existing product
- Improve performance of the existing code
- Find root causes of software defects and come with solutions to eliminate them
- Implement new user interfaces which are intuitive and consistent with the existing style
- Insure timely deliverables of new planned product versions and occasional emergency releases
- Communicate with other developers, technical writers and field analysts
- Occasionally travel to customers and participate in customer projects where his or her code is utilized

Qualifications:

- Bachelor's degree in Computer Science, Computer Engineering or a related field of study or equivalent combination of education and experience
- Minimum 3 years of development in C# in a Visual Studio environment
- Minimum 2 years experience with Oracle or other relational databases
- Strong research and analysis skills
- Ability to work in a team, adapt to new development culture
