

**KNOWLEDGE REFINERY® is your
Mandatory Toolset to prepare for DOGE**
KR gives you the proof to prepare your agency
and protect your purpose.

The DOGE Mission

The new administration is bringing a renewed focus and new approach to Government transparency, efficiency, and cost reduction with The Department of Government Efficiency (DOGE) program. As the administration prepares itself to execute its priorities, DOGE will be at the forefront to (1) reduce the number of agencies within the U.S. government, and (2) reduce outdated and duplicate operations in the remaining agencies by deploying innovative technologies to streamline operations to increase efficiency and lower costs and risks.

Challenge is Opportunity

As your agency supports and evolves its business/mission requirements, you have had to respond with changes to both your human- and software-run operations. Layering modern fixes with legacy systems has created complexity and—though efficiency is a goal—your views into your operations are now obscured, increasing cost, risk, and inefficiencies. Whether your mission focus is healthcare, finance, national security, supply chain and logistics, transportation, or defense, obtaining transparency across your operations delivers the opportunity you need to quickly prepare for DOGE, including measuring your existing inefficiencies, risks and costs.

You need new tools that let you see your operations in a comprehensive way, giving you the knowledge you require to measure your inefficiencies and your accumulated operational and technical debt. Tools that give you permanent transparency—a knowledge baseline—significantly improve program oversight and accountability for quick and accurate changes and proof of accurate implementation and compliance.

Approach

Knowledge Refinery® (KR) delivers an integrated knowledge repository across your operational workflow/data—and the underlying technical implementation—for comprehensive transparency and traceability. KR enables you to quickly assess and decide what to keep, remove, or change, as well as what may be missing. Use this baseline knowledge to plan the transformation and modernization of your operations, while addressing resilience and compliance reporting *with automation at scale*. This baseline is the critical first step to informed decisions and planning for efficient change.

KR is the only solution that delivers comprehensive and traceable views of operations within and across agencies. KR's automation and AI technologies (both heuristics and GenAI) mean that what once took months and years can be achieved in weeks. It is the unbiased and independent choice for proactive decision-makers.

Result

KR-delivered knowledge repositories enable agencies to make informed decisions to proactively meet internal and external goals, plus permanent control and accountability. KR is a game-changing, American, patented innovation enabling you to achieve next-generation efficiency.
